Eyewear

Callaway HYBRID SERIES

www.callawayeyewear.com | \$130

Four unique frame designs make up Callaway Eyewear's Hybrid Series, their fourth and newest lineup of golf course specific glasses. The new collection sees the blend of magnesium and hi-tech alloys that result in durable frames with superior weight distribution. The H302-SL (shown) protect the eyes, but also look pretty sharp, too.

SunBuster SPORTS ENHANCEMENT

www.sunbuster.info | \$140

With over 150 Tour professionals and caddies using SunBuster's trademark "purple" PuttReaders lenses every week, you know they must be working. One reason is they bring out green contours and help clarify your playing area. Another feature is how well they protect your eyes from the damaging UVA/UVB rays. They are, as the Sunbuster Website puts it, "like safety belts for the eyes."

Tifosi SLIP

www.tifosioptics.com | \$60

Tifosi's GT Lens technology (so named because they were designed for Golf and Tennis) features "object illumination," which helps the user pick up ballflight. The "Slip" (shown) comes with three interchangeable lenses, a standard of many Tifosi offerings. With 100 percent UVA and UVB protection and Glare Guard™, they'll not only look good, but also protect you from the sun's harsh rays.

Peakvision SPORTS EL1

www.peakvisionsports.com | \$229-\$469

PeakVision's newest offering, the ELO model, weighs just over 11 grams. How do they do it? Well, the ELO is made from pure titanium, the same material that made metal drivers a hit. Its slender frame makes the ELO perfect for smaller faces, while its larger compatriot, the ELO Regular, is a little bit heavier (due to a larger lens). Both come with PeakVision's patented Dual Zone lens technology.
